

Veritech Grease Filters

Veritech grease filters are designed to capture oil and grease in commercial kitchen extraction canopies. The filters are uniquely designed to capture up to 94.6% of grease particles, in comparison to only 40% grease capture using the more traditional baffle filters.

The filters have been tested by independent laboratories to prove their efficiency and flame reduction characteristics. No other kitchen filters have been tested so extensively, which is why we know that grease can be removed by up to 94.6%.

Veritech filters versus traditional baffle filters:

- Proven grease reduction ability
- Excellent barrier against passage of flames
- Captured oil can be used for recycling
- UL1046 Accredited
- UDI 2052 Accredited

- Significantly reduces duct cleaning requirements
- Reduces fire risk, which helps reduce insurance premiums
- Simple to detach and clean
- Return on investment is as short as 12 months

Product Specification

Model	Type 94 5010
Volume Flow Rate (m ³ /s)	up to 0.28 per filter
Face Velocity (m/s)	4.2 (optimal)
Pressure Drop (Pa)	200
Weight (kg)	up to 4.55
Material	Grade 304 Stainless Steel
Noise (dB)	50
Max Dimensions (LxDxW)	496 x 170.5 x 171mm
